A method is proposed for isolating from insects a highly
polymerized DNA (molecular weight 1.0×10^6) and this
DNA is chemically characterized. The nucleotide com-
position of DNA isolated from Bombyx mori L., Anthe-
raea pernyi G. M. and Musca domestica L. differs but
little from that isolated from mice. All the DNA's
studied belong to the A'T-type. (Author)
